

D-Scriptive

SOUND ASSOCIATES INCORPORATED

D-Scriptive is a state-of-the-art, wireless, aid for the visually impaired that provides audio description to individual hand-held receivers. Originally designed for live theatrical productions, this fully-automated system delivers comprehensive descriptions of any recurring live event.

D-Scriptive, offered exclusively by Sound Associates, combines the power of a CS-3 Computer Base Station with any wireless listening system to create accessibility for any performance from any location.

The audio description is pre-recorded and stored on the CS-3 control station or on individual personal computers. Automation is achieved through the CS-3, which utilizes midi show control or SMTE / midi timecode to cue and play the audio file. These files are continually cued to run concurrent with the live program or presentation with the precision of real-time audio description while remaining completely automated.

FEATURES:

- ↔ Fully Automated (no technician required)
- ↔ Compatible for use with Sound Associates' I-Caption® System
- ↔ CS-3 can store and deliver up to 3 stereo audio channels (CS-3 Lite: 1 stereo audio ch.)
- ↔ Excellent Audio Quality
- ↔ Highly Reliable
- ↔ Easy Setup and Installation

APPLICATIONS:

Ideal for live theatrical productions, movies, museum tours and corporate orientations and training programs.

Multi-lingual applications where multiple pre-recorded audio segments are required.

Also supports individual closed captioning, I-Caption® for hard of hearing audience members.

D-Scriptive delivers mental images for visually impaired patrons in live theaters, movies, or any circumstance where a program is repeated on numerous occasions. It is wildly popular both on Broadway and their professional tours. It can be an invaluable tool in breaking down accessibility barriers in the corporate environment as well.

D-Scriptive can be offered in conjunction with the I-Caption (individual closed captioning) and ShowTrans® (language translation) only available only from Sound Associates.

Audio description is an additional narration that describes all significant visual information such as body language, facial expression, scenery, action, costumes-- anything that is important to conveying the plot of the story, event or image. It is a vital service that can help people with sight problems to fully enjoy leisure activities.
